THE PROBLEM

Why Can't Big Tech Just Build This?

- OpenAI/Anthropic: Model providers — conflict of interest auditing own models
- ServiceNow/Archer: GRC workflow — no multi-agent AI or crypto evidence
- Palantir: Data analytics — no deliberation, dissent, or air-gapped multi-agent
- Snowflake/Databricks: Data platforms — no decision governance
- From scratch: 205K+ tests, 11 sovereign patterns = years of engineering

THE SOLUTION

How Datacendia Solves This

Unique position: multi-agent deliberation + crypto evidence + sovereign deploy + compliance framework. No single incumbent has all four.

Key Use Cases

- **vs AI providers — govern their models**
- **vs GRC — generate evidence they manage**
- **vs Data platforms — decision layer on top**
- **vs Consultancies — automate manual work**
- **Integration-first architecture**

MULTI-AGENT DECISION ENGINE

Decisions Made by Specialized AI Agents — Not One Black Box

- Each decision is deliberated by role-specific agents: CFO, CISO, Legal, Strategy, Risk, and more
- Every agent provides a confidence score and reasoning — dissenting views are preserved, not hidden
- War Room, Governed Deliberation, and Quick Brief modes adapt to the urgency and stakes of each decision

Every Decision Tracked with Confidence, Agents, and Full Evidence Chain

- Complete decision history — searchable by status, confidence level, agent participation, and date
- Each decision links to the full deliberation record: who participated, what they recommended, and why
- Regulators and auditors can trace any decision back to its evidence and reasoning in seconds
