

TECHNICAL DEEP DIVE

Multi-Agent DeliberationArchitecture

→ 50+ specialized AI agent presets, cryptographic audit chains, zero-copy data architecture, and 4 deployment modes — from cloud to air-gapped.

SYSTEM ARCHITECTURE

Four-Layer Platform Stack

- React 18 SPA with 82 route files, real-time WebSocket updates, i18n for 26 languages with RTL support. Responsive design system with dark mode. Decision Replay Theater for step-by-step visualization.
- CendiaChronos (time machine), Ghost Board (AI board meetings), CendiaPreMortem (failure analysis), Decision Debt, CendiaLive (real-time deliberation), CendiaReplay, CendiaEcho (outcome tracking), CendiaLens (interpretability), CendiaCollapse (stress-testing), CendiaPulse (mission control), CendiaCrisis (incident response), CendiaROI, CendiaDCII.
- CendiaOversight (regulatory radar), CendiaNotary (crypto signing), CendiaVault (evidence storage), CendiaProvenance (decision lineage), Decision Packets, CendiaCrucible + CendiaRedTeam (adversarial testing), SGAS, CendiaCourt, CendiaSandbox, CendiaZKP, CendiaInsure, CendiaQuantumKMS, CendiaCarbon, CendiaJurisdiction, CendiaCompliance.
- Zero-copy architecture with 16 native connectors (Snowflake, Databricks, PostgreSQL, BigQuery, etc). 4 deployment modes. 11 sovereign patterns. Zero-trust security. API-first with 156 endpoints.

Multi-Agent Deliberation Flow

- Decision query + data context
- 50+ agents receive prompt
- Analysis, debate, challenge
- Confidence-weighted votes
- Arbiter produces decision
- Consensus, Adversarial, Red Team, Speed, Deep Analysis, Compliance-First, Financial-First, Risk-Heavy, Innovation, Balanced, PreMortem, Ghost Board
- Each agent has unique system prompts, domain knowledge, and reasoning chains. No agent can see another's initial analysis — preventing groupthink.
- Minority opinions are preserved with full reasoning. The Red Team agent actively challenges consensus. Human intervention points at every stage.

Zero-Copy — Your Data Never Moves

- No data exfiltration surface — data stays in your security perimeter
- No ETL pipelines — no maintenance, no data drift, no stale copies
- No compliance burden — data sovereignty is automatic
- Real-time freshness — agents always query live data
- Traditional analytics platforms copy your data into their infrastructure. Datacendia queries your data in place — it never leaves your database.
- Palantir copies your data. Databricks copies your data. Snowflake stores your data. Datacendia is the only platform that provides AI decision intelligence without ever possessing a copy of your data.

DCII

Cryptographic Audit Infrastructure

- Verification layer. Every claim made by an agent is cross-referenced against data sources. Confidence scores based on evidence strength.
- Timestamping service. SHA-256 hash of every deliberation step with RFC 3161 timestamp. Immutable, tamper-evident chain.
- Attestation protocol. Independent verification that deliberation followed the declared mode and all agents participated.
- Precise temporal ordering of all events. Enables "decision replay" — reconstructing exact deliberation sequence.
- Deduplication and pattern matching. Identifies when a current decision resembles past deliberations, surfacing historical context.
- Institutional knowledge persistence. Agents learn from past deliberations without retraining — organizational wisdom accumulates.
- For auditors & regulators: Hand them the DCII hash chain — every agent's reasoning, every vote, every dissent, cryptographically timestamped and tamper-evident. This is the audit infrastructure that AI governance demands.

PRODUCTION PLATFORM

Enterprise UI — Not a Prototype

DEPLOYMENT

Four Modes — Same Platform, Same API

- 156 REST endpoints work identically regardless of deployment mode. Code written for Cloud works on Air-Gapped without modification.
- Start on Cloud SaaS for evaluation. Migrate to Private Cloud or On-Prem for production. No re-architecture required — just redeploy.

TECH STACK

Modern Enterprise Stack

- TypeScript end-to-end for type safety. React for the richest enterprise UI library ecosystem. PostgreSQL for reliability. Docker/K8s for deployment flexibility. Multi-model AI to avoid vendor lock-in.
- Foundation tier is Apache 2.0 licensed (datacendia-core). Enterprise and Strategic tiers are commercial. This drives developer adoption and enterprise conversion.

MULTI-AGENT DECISION ENGINE

Decisions Made by Specialized AI Agents

- Role-specific agents: CFO, CISO, Legal, Strategy, Risk
- Confidence scores and reasoning — dissent preserved
- War Room, Governed, and Quick Brief modes

Every Decision Tracked with Full Evidence Chain

- Complete searchable decision history
- Full deliberation records linked to each decision
- Trace any decision back to evidence in seconds

All Decisions		Ask Council	Refresh
6 decisions found			
Q Search decisions...	▼	All Modes ▼	All Status ▼
Should we expand into the European market in Q2?			
🔥 Deliberation	✅ Completed	0.87% confidence	👥 6 agents ⌚ Mar 15, 2026, 08:14 PM
The Council recommends proceeding with EU expansion, prioritizing Germany and Netherlands. Risk-adjusted ROI projects 34% within 18 months. Key risks: regulatory compliance (GDPR Article 22), currency exposure, and local hiring timeline.			
Evaluate the acquisition of DataSync Corp for \$12M			
🔥 Deliberation	✅ Completed	0.72% confidence	👥 8 agents ⌚ Mar 14, 2026, 08:14 PM
Split recommendation: CFO and COO agents favor acquisition for talent and IP. CISO agent flagged 3 critical security vulnerabilities in target codebase. Legal agent noted pending IP litigation. Recommend extending due diligence by 30 days.			
What is the optimal pricing strategy for Enterprise tier?			
🔥 Deliberation	✅ Completed	0.91% confidence	👥 5 agents ⌚ Mar 13, 2026, 08:14 PM
Strong consensus on value-based pricing at \$2,400/seat/year with volume discounts (10+ seats: 15%, 50+: 25%). Projects 28% increase in enterprise pipeline conversion. CMO agent recommends bundling compliance module as differentiator.			
Risk assessment for migrating to multi-region cloud infrastructure			
⚡ Quick Brief	✅ Completed	0.83% confidence	👥 7 agents ⌚ Mar 12, 2026, 08:14 PM
Red team identified 3 critical risks: data sovereignty gaps in APAC region, 340ms latency spikes during cross-region failover, and \$180K/month cost increase. Mitigation plan provided with phased rollout starting US-East → EU-West → APAC.
