WHY VERTEX VENTURES

Why Datacendia Aligns with VERTEX VENTURES

Vertex Ventures invests in venture capital opportunities. Datacendia is the missing governance layer for enterprise AI.

Your Thesis → Our Mission

Datacendia is the missing decision-evidence layer for enterprise AI — the infrastructure that sits between AI deployment and regulatory compliance. As AI adoption accelerates, every enterprise needs cryptographic proof of AI decisions.

Portfolio Adjacency

- ✓ Grab
- ✓ Patsnap
- ✓ Nium

vertex-ventures portfolio includes Grab, Patsnap, Nium. Datacendia completes the stack with AI governance and audit.

THE PROBLEM

Enterprise AI Has No Decision Evidence Layer

- Every enterprise deploying AI will be required to produce decision evidence under regulatory or legal challenge — and no platform exists to generate it
- EU AI Act (2025–2026) mandates governance for high-risk AI — penalties up to €35M or 7% revenue
- DORA requires AI operational resilience for financial services by Jan 2025
- No widely adopted platform provides cryptographically verifiable decision evidence at the decision level
- Enterprises face regulatory risk with every AI deployment — and have no solution

THE SOLUTION

Multi-Agent Deliberation with Cryptographic Evidence

- Multi-agent deliberation with role-specific AI agents (CFO, CISO, Legal, Strategy, Risk, and more)
- Cryptographic decision evidence — Ed25519 signatures, Merkle trees, RFC 3161 timestamps
- Sovereign deployment — Cloud, Private Cloud, On-Premises, and Air-Gapped
- EU AI Act, DORA, GDPR, HIPAA compliance mapping across 23 jurisdictions
- Zero-copy data architecture — data never leaves customer infrastructure
- Open-source core (Apache 2.0) with enterprise features

Sector: Decision Evidence Infrastructure

Our moat: We define the evidentiary artifact that regulators will eventually expect. First to codify it wins the category.

Why This Must Exist Now

EU AI Act (2025–2026) → enforceable auditability requirements. DORA → operational traceability for financial services. Litigation risk → retrospective scrutiny of AI decisions. Enterprise AI adoption → exploding unaudited decision surface. This creates a new infrastructure requirement: decision evidence.
