THE PROBLEM

Why Can't Big Tech Just Build This?

- OpenAI/Anthropic: Model providers — conflict of interest auditing own models
- ServiceNow/Archer: GRC workflow — no multi-agent AI or crypto evidence
- Palantir: Data analytics — no deliberation, dissent, or air-gapped multi-agent
- Snowflake/Databricks: Data platforms — no decision governance
- From scratch: 205K+ tests, 11 sovereign patterns = years of engineering

THE SOLUTION

How Datacendia Solves This

Unique position: multi-agent deliberation + crypto evidence + sovereign deploy + compliance framework. No single incumbent has all four.

Key Use Cases

- vs AI providers — govern their models
- vs GRC — generate evidence they manage
- vs Data platforms — decision layer on top
- vs Consultancies — automate manual work
- Integration-first architecture

Why This Is a Compelling Investment

Moat is architectural — four capabilities no incumbent combines.

Replicating requires years and complete platform rearchitecture.
